The Client

Leading commercial public Sector bank in India

Industry

Banking

Overview

The bank has presence in 25 countries across the world - with over 5500+ branches in India and 100+ offices overseas. With more and more data flowing from internal and external sources. The bank wanted Quadratyx to guide in setting up Analytics Center of Excellence (ACoE) and create a road-map for Big Data analytics.

Business Challenge

Client wanted to setup an ACoE which serves as a central source of trust and collects, stores, transforms and cleanses data from disparate sources into actionable insights. But due to limited knowledge and in-house expertise in setting up ACoE, Bank required a knowledge partner to guide and assist.

Our Approach:

- ACoE Architecture requirement based on mapping client businesses, gap analysis and readiness assessment
- Generate RFP's followed by vendor validation & selection
- Identify client specific potential use-cases for Big data solution
- Proactively advise Bank on potential pitfalls
- Evaluate work done by selected vendor & ensure compliance

Outcomes

- ✓ Proactively advise on new data science technologies that are likely to have substantial positive impact on the Bank
- ✓ Dedicated consulting team member at Bank's premises
